

# GIREVE facilitates B2B invoicing of electric vehicle charging in roaming

By launching its new service BOOST! Clearing, GIREVE aims at simplifying financial exchanges between charging service operators in roaming. The roaming platform now enables automatic control and monetary billing of electric vehicle drivers' charging sessions, a first step to simple, transparent and efficient invoicing and payment.

## A service dedicated to e-mobility operators

When an electric vehicle driver charges his car while roaming, which means that he's using charging networks for which he has no direct subscription, his operator must pay compensation to cover his client's charging fees. Those monetary flows are rich, varied and complex. They imply important development and management costs for all operators on the market.

With the launch of its new service BOOST! Clearing, GIREVE aims at answering its clients' demand, helping them improve their service quality and productivity to the benefit of electric vehicle drivers.

More specifically, GIREVE first delivers a service to automate quality check of data exchanged between operators. It enables real time billing of charging sessions based on roaming contracts they signed via GIREVE's Connect Place. Given the wide range of pricing used in Europe, this service really helps billing and invoicing processes.

**To Bruno Lebrun, GIREVE's CEO,** *"In addition to facilitating contract-making and real-time data transfer between e-mobility and charging operators, GIREVE is now getting involve in B2B invoicing. We follow our objective, to facilitate the creation of an innovative service market by offering B2B services that will simplify business processes, which are barriers to entry for e-mobility operators."*

**A first pilot project in partnership with Mobilygreen and the SDE28 helped refine the service and prove its relevance. To Eric Colmar, Development Director at Mobilygreen,** *"All initiatives aimed at simplifying commercial, technical and financial processes of roaming contracts between charging and e-mobility operators can only benefit the end user. It is the case with GIREVE's Clearing service that guarantees clear, reliable and shared information real time between operators. This service helps avoid at early stage inevitable CDR mistakes, to improve service quality for the end user. Work on GIREVE's Clearing service shed light on other opportunities for improvement: B2B invoicing, simpler invoicing rules, etc."*

**To Lionel Chauvet, Deputy Director of the Territoire d'Energie Eure-et-Loir,** *"The issue of gathering invoicing data is a tedious work that needs to be faced up to. GIREVE's support on this process appears necessary to avoid debating on mistakes not detected. In addition to securing the process, GIREVE's support in billing European operators gives a guarantee on all the flows, while reducing the time it takes us. Since 2015, we've been impatiently waiting for this service."*

## BILLING OF CDR

Through GIREVE's platform, the e-mobility operator that subscribed to the service now receives enriched charge detail records, with highlights on mistakes and price calculation. This calculation is based on the price of the roaming agreement signed on the Connect Place with the charge point operator.

## ABOUT GIREVE

To support the rapid growth of electric mobility, GIREVE brings industry operators together: charging point operators, car manufacturers, energy suppliers, public institutions...

GIREVE is an integrated platform offering innovative services that enable mobility operators to easily build partnerships. GIREVE provides and develops the link that enables true electric mobility roaming by acting as an interface between a diversity of dissimilar systems.

Charging point operators achieve the high profile needed to ensure the profitability of their facilities, and e-mobility service providers enhance their service offering to drivers.

Its goal is to provide competitive electric mobility that benefits everyone.
