

# GIREVE consolidates its position in the UK with Franklin Energy

Leading electric vehicle charging technology company, Franklin Energy, joined GIREVE's roaming platform to open its network to roaming. Franklin Energy got connected to GIREVE to make its charging points available on the roaming platform. All public charging points of the network will now be accessible and open to roaming for new users with different e-mobility solutions.

**Franklin Energy is operating the network of charging points named LiFe.** Currently focused in the North of the UK, it is going to expand across the country and into Ireland within the 12 months, reaching 100 charging points by the end of 2019. Access to the LiFe network is made via smartphone app or RFID card.

**To Bruno Lebrun, CEO of GIREVE,** "With Franklin Energy, we are consolidating our presence in the UK, where we are not as successful as in the rest of EU so far. We are happy to have an opportunity to show how relevant roaming can be for British operators and EV drivers"

**To Robert Byrne, Founder and Managing Director of Franklin Energy** "The UK is behind the Nordic markets when it comes to inter roaming, and we want to be seen as a leader in interoperability. We have partnered with GIREVE due to their excellent roaming service, close relationship with tier one EV manufactures and ease of integration to our network. GIREVE will open up our LiFe network to thousands of new EV drivers across Europe, making the customer journey and charging experience seamless for the end user."

## ABOUT GIREVE

To support the rapid growth of electric mobility, GIREVE brings industry operators together: charging point operators, car manufacturers, energy suppliers, public institutions...

GIREVE is an integrated platform offering innovative services that enable mobility operators to easily build partnerships. GIREVE provides and develops the link that enables true electric mobility roaming by acting as an interface between a diversity of dissimilar systems.

Charging point operators achieve the high profile needed to ensure the profitability of their facilities, and e-mobility service providers enhance their service offering to drivers.

Its goal is to provide competitive electric mobility that benefits everyone.
