

Roaming in Belgium with Blue Corner

Blue Corner got connected to GIREVE to open its charging network to roaming, and to offer its customer a wider charging network with their charging solution, the Blue Corner card. Blue Corner operates as a CPO (Charge Point Operator) of around 1.500 charge points in Benelux and is also an eMSP (e-Mobility Service Provider) with customers in the Benelux. Blue Corner offers all kinds of services around EV charging.

Blue Corner is an Antwerp-based company in Belgium that delivers 360° services around everything that has to do with the charging of electrical vehicles. The company offers charger installation at home, at work and in the public domain. Blue Corner operates as a CPO (Charge Point Operator) of around 1500 charge points in Benelux and is also an eMSP (e-Mobility Service Provider) with customers in the Benelux. Blue Corner offers all kinds of services around EV charging including installation, maintenance, reimbursement of home charge sessions, billing of public chargers, Charge Passes and their Interoperability.

“Roaming is of course very important to make the switch to EV use as easy as possible. The EV driver wants to be able to recharge his car wherever he finds a charging point. GIREVE is a fantastic platform to group all bigger and smaller CPO's in France and Europe which makes it easier for CPO's and MSP to make their cards and charging points available for other parties in Europe. It is almost impossible for single MSP's to organise interoperability with all CPO's.” Dirk Vandereyt, Blue Corner

Blue Corner operates public charging points in Benelux, mainly in Belgium. Most of their chargers are AC chargers that deliver 22 kW but they also have DC Chargers of 50 kW. You can find Blue Corner's chargers throughout the Benelux, mainly at destination locations like shopping centres and at almost all parking operators in Belgium but also in the different cities and communes.

“We did connect to GIREVE's platform because we recognize Gireve as the most important platform that can give us access to France and other Mediterranean countries.”

Blue Corner plans to continue to build their public network in Benelux and expand their services to include new services, mainly in the area of power management domestique and B2B and vehicle to Grid/Home charging.

“At the moment our first priority will be to expand the reach of our Blue Corner charge pass. Next step will focus on the roaming of other charging passes at our charge points.”
