ETREL and GIREVE have joined up to provide roaming to partners in Europe

Paris-Grosuplje, 3rd March 2020 – Slovenian CPMS provider Etreel integrated its charging management software OCEAN to GIREVE's roaming platform, opening up new possibilities for partner networks to collaborate with GIREVE thus simplifying charging experience for OCEAN users across Europe.

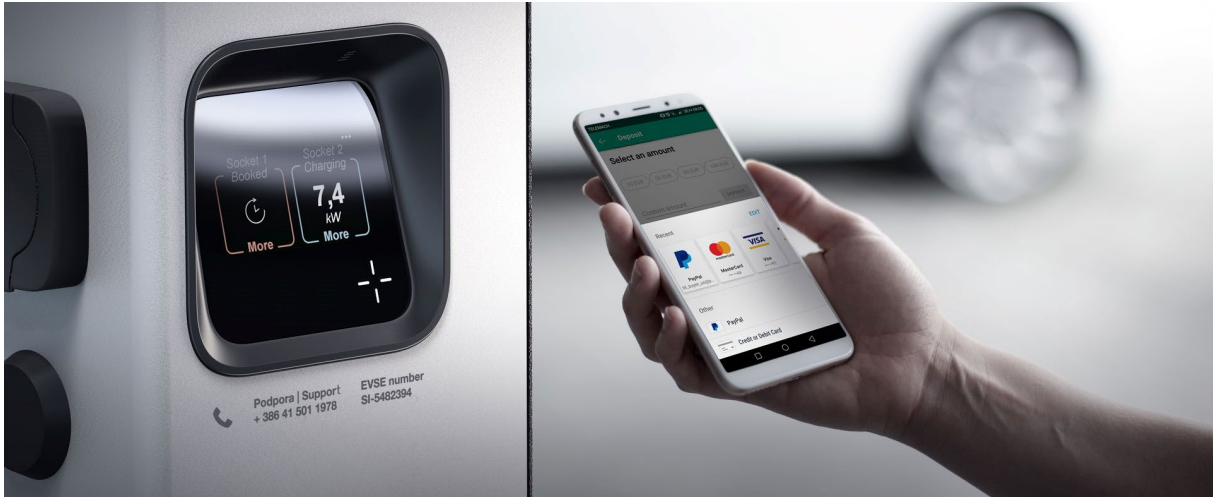

Etreel is one of the leading providers of charging management software and interactive charging stations in Europe. Etreel OCEAN, a Charging Point Management Software, is used by many European top e-mobility companies. The OCEAN system currently facilitates about 3 MIO electric kilometres monthly across Europe.

"We have identified GIREVE as one of the most prominent players in roaming. [...] Today, we can proudly say, Etreel OCEAN is integrated with GIREVE, both with CPO and EMP roles and accessible for activation for all Etreel partners using OCEAN platform." Tanja Mešiček, Marketing, Etreel

Etreel's first clients to be connected to GIREVE are notably EasyGo!, GreenWay Networks and Hrvatski Telekom. The roaming integration between GIREVE and Etreel will allow seamless onboarding to GIREVE for all Etreel partners.

Etreel has opted for the connection through the OCPI protocol, which is one of the two open protocols developed by GIREVE.

"We are delighted to welcome Etreel on our platform. Etreel is a leading player on the market, with clients from across Europe. Our partnership opens up new opportunities for e-mobility rollout in Europe." Jingjing Ma, Business Development Manager, GIREVE

About Etrele

Etrele is the leading manufacturer of interactive charging stations for electric vehicles and provider of SaaS platform OCEAN for charging point management. We are facilitating sustainable e-mobility with partners in over 35 countries worldwide.

ETREL AC charging stations cater to a variety of home or business use cases, offering intelligent user control and dynamic power management by interacting with the facility, local energy production sources, and the energy grid. The product's durability and design have been well received on the markets from the Faroe Islands to Australia.

OCEAN charging management platform offers an end-to-end solution for any company aiming to provide excellent charging services to EV drivers or optimise its charging infrastructure management. White-label software package with tailored modules and API integrations offers flexibility with no hidden fees.
